

Saguaro Man - Artist's Electrical Safety Checklist

- * All Art Projects that require grid power must be inspected for safety and compliance by an Electrical Power Grid team member before use of electrical power is granted.
- * Electrical distribution (distro) boxes are placed throughout the event. Use only the outlet that an Electrical Grid team member will assign you on initial start-up. Do not plug in until cleared for use.
- * Event Generator is “Off-Limits” to anyone who has NOT been vetted to operate it.
- * Bring the proper extension cord.
 - 100 feet recommended since you may be a ways from the nearest distro.
 - Use only weather-resistant heavy gauge extension cords marked “for outdoor use.”
 - Proper sizes are rated 12, 14 or 16 gauge.
 - Use grounded (three-pronged) cords and never remove the grounding pin.
- * Examine cords, and all your project wiring, for defects such as; cracked housing, splits in plastic, and fraying of wires. Defects can result in power loss, shock, electrocution or fire.
- * In case of rain:
 - Keep all connection points on your project covered.
 - If using a power strip, mount it above the ground and cover/waterproof it well.
 - Never power-up or plug-in while wet or close to water. Make sure you are dry and not in contact with water or metal surfaces.
 - If rain is present, only use battery powered tools near wet areas.
 - note - the distro box is equipped with a ground-fault circuit interrupter (GFI) to help prevent electrocutions and electrical shock injuries.
- * Electrical Power Grid will be off from 6AM – 11AM everyday with no power on Sunday.
- * If you find a LOCK-OUT tag on your project, you must find a Power Lead before we can reconnect you.
- * Find a Power Team member if you have any questions.
Power Leads are: Chad/Do-it, Shane/Thumper, Craig/Coop

Sample LOCK-OUT tag:
